

# How IRC?

Need a special program, called a client

Lots of clients for all major platforms

Windows: Hexchat, AdIRC, mIRC

macOS: Textual

Linux: weechat, irssi, BitchX, Hexchat

Web: TheLounge, Convos, KiwiIRC, IRCCloud

Literally anything with an internet connection

These work, but (most) have the same downfall — connections are not persistent

# How IRC?

Bouncers!
